

Sales Dashboard Analysis Notes

Sample report template for monthly sales review, KPI tracking, and decision follow-up

Document Type	Dashboard Analysis Notes
Period	June 2026 (Sample)
Department	Sales / Business Development
Prepared By	Sales Analyst / Supervisor
Status	Draft for Review

Purpose

This document helps sales teams review dashboard performance, explain changes in key metrics, identify root causes, and record follow-up actions. Replace the sample values with actual dashboard data before presenting to management.

Recommended use: weekly review, monthly sales meeting, management reporting, performance monitoring, and portfolio documentation.

1. Executive Snapshot

Use this section to summarize the most important performance movements from the sales dashboard. Keep the notes concise, evidence-based, and focused on action.

Revenue

Rp 1.28B

Target: Rp 1.35B
Status: **Review**

Gross Margin

31.5%

Target: 30.0%
Status: **OK**

New Customers

86

Target: 100
Status: **Below**

Conversion Rate

18.4%

Target: 20.0%
Status: **Review**

Monthly Revenue Trend - Sample

Area	Sample Finding	Impact	Suggested Action
Revenue	Revenue reached Rp 1.28B, below monthly target by 5.2%. Growth is positive but not enough to close the target gap.	Medium	Review lost deals, speed up pending quotations, and prioritize high-value prospects.
Margin	Gross margin stayed above target at 31.5% because discounting was controlled on large deals.	Positive	Maintain discount approval policy and monitor low-margin orders.
Customer Acquisition	New customers were below target. Repeat orders helped revenue but acquisition pipeline weakened.	High	Increase prospecting activity and strengthen lead qualification.
Conversion	Conversion rate decreased from the previous month, mainly during quotation to negotiation stage.	Medium	Analyze pricing objections and response time to quotation requests.

2. KPI Dictionary and Dashboard Interpretation

Define every dashboard metric clearly so that each reviewer reads the same number in the same way. This reduces misunderstanding during sales review.

KPI	Definition	Formula / Source	Interpretation Notes
Revenue	Total confirmed sales value within the selected period.	Sum of paid/approved invoices or closed-won order value.	Compare to target, previous period, and seasonality.
Gross Margin	Profit percentage after direct cost of goods/services.	$(\text{Revenue} - \text{Direct Cost}) / \text{Revenue} \times 100\%$.	High revenue with weak margin should be reviewed carefully.
Leads	Potential customers entering the pipeline.	CRM lead records by created date.	Segment by source: website, referral, ads, repeat customer, sales prospecting.
Conversion Rate	Percentage of leads or opportunities becoming sales.	$\text{Closed Won} / \text{Qualified Leads} \times 100\%$.	Use consistent funnel stage to avoid misleading results.
Average Order Value	Average sales value per transaction.	$\text{Revenue} / \text{Number of orders}$.	Useful to detect whether growth comes from volume or larger deals.
Sales Cycle	Average time from first lead to closed won.	$\text{Closed won date} - \text{lead created date}$.	Long cycles may indicate slow follow-up, approval delay, or pricing issue.
Lost Deal Rate	Percentage of opportunities marked lost.	$\text{Lost Opportunities} / \text{Total Opportunities} \times 100\%$.	Always classify lost reasons for better corrective action.

Analyst note

Do not compare KPIs only against target. Also compare against previous month, same month last year, campaign period, sales capacity, and external business context.

Review Question	Yes/No	Notes
Are all dashboard filters correct: period, branch, sales person, product, and customer type?		
Is the target value already approved by management?		
Are canceled, refunded, or duplicate transactions excluded correctly?		
Are all pending quotations and open deals updated in CRM?		

3. Funnel, Segment, and Channel Analysis

Segment	Sales Value	Share	Observation	Action Note
Existing Customers	Rp 740M	58%	Repeat orders remain the biggest revenue driver.	Maintain retention calls and proactive renewal reminders.
New Customers	Rp 310M	24%	Acquisition is below target due to fewer qualified leads.	Improve lead quality and campaign landing page.
Corporate Accounts	Rp 180M	14%	Long approval cycle but high potential value.	Assign owner and track next action date.
Other / Retail	Rp 50M	4%	Small contribution with high transaction volume.	Automate follow-up and standardize offer template.

Channel	Lead Count	Won	Conversion	Notes
Website / SEO	280	62	22.1%	Good conversion, continue content optimization and fast response.
Referral	115	39	33.9%	Highest quality leads, create referral follow-up program.
Paid Ads	350	44	12.6%	High volume but weak quality, review keywords and targeting.
Sales Prospecting	255	39	15.3%	Needs stronger qualification and follow-up discipline.

4. Variance Analysis and Root Cause Notes

Record the gap between actual performance and target. Then explain the likely cause using evidence from dashboard, CRM notes, and sales team feedback.

Metric	Target	Actual	Variance	Status	Likely Cause / Evidence
Revenue	Rp 1.35B	Rp 1.28B	-Rp 70M	Review	Several large quotations still pending approval.
New Customers	100	86	-14	Below	Lower lead quality from paid ads and slow initial response for some inquiries.
Gross Margin	30.0%	31.5%	+1.5 pts	OK	Discount control and better product/service mix.
Avg. Order Value	Rp 7.2M	Rp 6.9M	-Rp 0.3M	Review	More small orders; fewer corporate deals closed this month.
Sales Cycle	10 days	13 days	+3 days	Review	Negotiation and approval took longer for large accounts.

Root cause analysis template:

Problem Statement	Evidence	Possible Root Cause	Owner	Next Check
Example: conversion from quotation to closed won is below target.	Quotation follow-up response time increased to 2.8 days.	Slow follow-up and unclear pricing explanation.	Sales Lead	Next weekly meeting

Important
A dashboard shows what happened. Analysis notes should explain why it happened, what risk it creates, and what action will be taken.

5. Action Plan and Follow-Up Tracker

Convert findings into specific action items. Every action should have an owner, due date, measurable expected result, and review status.

No.	Action Item	Owner	Due Date	Expected Result	Status
1	Follow up all pending quotations above Rp 20M and update next action date in CRM.	Sales Team	D+3	Shorten pending pipeline and improve close rate.	Open
2	Review paid ads leads by keyword, location, and customer type.	Marketing	D+5	Reduce low-quality leads and improve cost per qualified lead.	Open
3	Create standard pricing explanation for high-objection products/services.	Sales Lead	D+7	Improve negotiation clarity and reduce lost deals due to price.	Open
4	Prepare weekly dashboard review using same KPI definitions.	Supervisor	Weekly	Consistent monitoring and faster corrective action.	Open

Follow-up notes:

Date	Discussion / Update	Decision	PIC

6. Data Quality Checklist

Before presenting dashboard analysis, validate the source data. Many sales review mistakes happen because filters, status, duplicate records, or transaction timing are not checked.

Check Item	Status	Notes
[] Period filter is correct and matches reporting calendar.		
[] Revenue source is consistent: invoice, paid invoice, or closed-won order.		
[] Duplicate leads, duplicate customers, and canceled transactions are excluded.		
[] Sales target has been confirmed by management.		
[] Customer segment and sales channel are mapped correctly.		
[] CRM stage is updated for open, won, and lost opportunities.		
[] Lost reasons are filled and categorized consistently.		
[] Dashboard numbers are cross-checked with raw export or accounting report.
